

WORKSHOP
Beyond the obvious: Academic Career Planning for Female Scientists
11.11.19

09.00-17.00, IDHEAP 006

Description and objectives

Every career is built on a variety of factors. Despite the conviction that expert recognition is the main constituent of an academic career, it is now commonly recognized that factors such as knowledge about university organization, transferable competencies, and scientific vision are increasingly important for the career planning process. During the workshop we will talk about frequently discussed as well as hidden career elements, expectations towards skills, self-presentation in the CV, and scientific vision.

Participants will

- reflect on other than purely scientific aspects of career building elements and their importance
- review their academic application documents
- Discuss changes linked to career transition points
- realize the power of a compelling scientific vision and its convincing presentation

Methods

Theoretical input, group, pair and individual exercises.

Preparation

Participants will receive prep assignments a couple of weeks before the workshop.

Trainer

Dr. Monika Clausen, trainer and coach for industrial partners, university clients and individuals.

Language

The workshop will be given in English. Participants can speak in French or English as preferred.
